Corporate Governance and Sustainability Symposium (8 May 2019)

Istanbul Aydın University (IAU) Disaster Training Application and Research Center (AFAM), We will hold the "Corporate Governance and Sustainability Symposium" on May 8, 2019 in cooperation with the Corporate Governance and Sustainability Application and Research Center and the Energy Policies and Markets Application and Research Center (EPPAM).

The symposium, which will be held with the theme of "Innovative Approaches in Governance" and will include experts in the field through both the Organizing Committee, the Scientific Committee and the papers, The concept of "sustainability", which has made great efforts to fulfill the requirements of today's world, will be addressed with the dimension of "corporate governance".

"Risk and Sustainable Financial Management with its Social and Economic Dimensions" on February 6, 2019, before the symposium, in order to examine the academic aspects of the topics to be discussed in the symposium, as well as their impact on the areas we consider as priority, On March 6, 2019, workshops will be held under the headings of "Energy Sustainability and Environmental Impacts" and the final texts to be prepared in line with the data obtained at the workshops will be declared at the symposium.

The interdependence relationship between sustainability and corporate governance will be revealed, current or potential problems related to practices in this field will be discussed and we believe that we will take an important step in fulfilling our responsibility towards the century we live in and the society we are a part of, with the symposium, where we aim to create a platform where solutions for these problems will be discussed.

Academicians and experts who want to present papers at the symposium <http://surdurulebiliryonetimvekalnma.aydin.edu.tr/> The abstracts they have prepared in accordance with the "Abstract Writing Rules" on the website of the website until 29 March 2019 surdurulebilir@aydin.edu.tr must be sent to the address by e-mail.

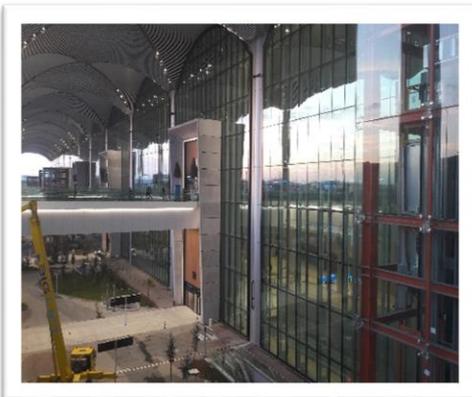

Technical Trip for Disaster Risk Management and Sustainability Project in Living Environments Affected by Large Investments

Istanbul Technical University, Arnavutköy District Municipality, under the direction of Istanbul Aydın University, In cooperation with Istanbul New Airport Operations (IGA) and under the consultancy of Istanbul Aydın University and Yıldız Technical University We made a technical visit to the application area of the Disaster Risk Governance and Sustainability Project in Living Environments Under the Impact of Large Investments, for which TUBITAK application was made with the 1003 code call.

Project consultancy and project team participated in the technical tour organized by Arnavutköy Municipality. During the technical tour, where the examinations were carried out for the Istanbul New Airport, the impact areas of the Kanal Istanbul and Northern Marmara Motorway projects were also observed.

The prepared project is determined by determining the high-level and local planning and investment decisions and the integrated risk governance and opportunities that they arise, To reveal the critical turning points in the spatial development process and to ensure the physical, social and economic sustainability of settlements, It aims to develop suggestions for providing the conditions for resilience against disasters and increasing the environment and quality of life.

We Gave a Seminar on Disaster Awareness and Engineering for Doğa College High School Students

Istanbul Aydın University Disaster Training Application and Research Center Director Prof. Dr. Mehmet Fatih Altan and Coordinator Serhat Yılmaz held a seminar on civil engineering and disaster awareness for Florya Doğa College High School students, which was followed with interest by the students.

prof. Dr. Mehmet Fatih Altan The importance of civil engineering through examples of earthquake resistant construction since ancient times and In her interview on the place of Turkish Civil Engineers in the world, They gave information to high school students who want to be civil engineers about what they should do.

Coordinator Serhat Yılmaz informed high school students about the natural and human-induced dangers of Istanbul and Turkey that could turn into disasters. They explained what should be done to prevent these dangers from turning into disasters individually, institutionally and socially, and what kind of responsibilities high school students, who are the adults of the future, have.

After the seminar, the exhibition of bridge models made by high school students was visited and information about the models was obtained from the students who made the models.
