Disaster Risks Reduction in Museums Project Was Accepted

Throughout history, humanity have tried to protect their achievements under the name of "rationalization" against natural risks such as earthquakes, volcanic explosions and floods, on the other hand, they have caused the formation of new types of risks such as technological accidents and environmental pollution.

Today, more and more fossil fuels are consumed every day, unconscious land uses, deforestation areas, greenhouse gases released into the atmosphere, wastes accumulated in the seas and other human-induced environmental damages give signals that a future intertwined with disasters awaits us.

It is an inevitable consequence that historical and cultural assets are also damaged by the structural and social destructive effects of disasters. Therefore, history has made a lot civilizations since the early days and bears traces from a different civilization, in every region, that serves as a cultural bridge between East and West date preparatory work to be carried out against the disaster in Turkey and cultural value of the obligation to include applications for the protection of open comes out.

The "Non-Governmental Organizations (NGO) Academy Cooperation Support Program" implemented by the Civil Society Development Center (STGM) in our country, where disaster vulnerability is high with its rich historical and cultural values, offers very important opportunities for this obligation.

As Friends of Cultural Heritage (KUMID), in order to transform this important opportunity for the benefit of our country and to protect our historical and cultural values against a possible disaster and emergency, Istanbul Aydın University Disaster Training Application and Research Center and Assoc. Dr. In cooperation with Mahmut Aydın, we prepared the "Project for Disaster Risk Reduction in Museums". This project we prepared was deemed worthy of implementation and supported by the Civil Society Development Center.

Basic Disaster Awareness Training in Bahçeşehir Final Academy School

As Istanbul Aydın University Disaster Training Application and Research Center, we have been continuing our social capacity building activities against disasters in December 2019 with the "Basic Disaster Awareness Trainings" that we have been continuing within the scope of our Corporate Social Responsibility studies since 2013. In this context, we completed the Basic Disaster Awareness Training on 25 December 2019 at the Bahçeşehir campus of Final Academy Schools.
