Cevre Bilim Anatolian High School Basic Disaster Awareness Training

As Istanbul Aydın University Disaster Training Practice and Research Center, one of the activities we prioritize for developing individual awareness in disaster preparedness is to increase the level of knowledge and awareness of students at primary – middle and high school levels. With this priority, we have carried out basic disaster awareness trainings for students and teachers in many schools throughout Turkey. As part of our ongoing work in December 2020, Çatalca environment and Science Anadolu high school has participated in our trainings. Our training, which was carried out with intensive participation of students, was carried out on-line due to the Covid-19 pandemic affecting the whole world in 2020.

TUSIAD Earthquake Power Workshop

The earthquake task force workshops are held by the Turkish Industrialists and businessmen Association (TÜSIAD) under the Development Policy Roundtable in order to keep the earthquake issue on the agenda continuously and to raise awareness of the private sector's earthquake preparation, to create and share good examples.

As Istanbul Aydın University Disaster Training Application and Research Center, we participated in the workshop held on 23 December 2020 on-line. and we shared our assessments of achieving the set goals.

Representatives of the leading institutions of our country in the private sector attended the workshop, which was moderated by TUSIAD board member Batu Aksoy. After the decisions taken at the workshop, the earthquake task force works and the final roadmap for disasters in the private sector priority are aimed.

Earthquake Safety Webinar of Existing Structures

About 92% of our country's territory and about 96% of its population are located in areas with various degrees of earthquake risk. Both the earthquakes we experienced in historical periods and the earthquakes affecting Elazig and Izmir in 2020 have shown us that a significant part of our building stock lacks sufficient security against a possible earthquake. For this reason, the need to examine our existing structures in the dynamic domain for earthquake is revealed.

However, in order to address the lack of information on how to ensure the earthquake resistance of a structure throughout the community, Istanbul Aydın University Disaster Training Application and Research Center (AFAM) conducted an earthquake safety Webinar of existing structures on December 24, 2020.

According to the types of structures in Webinar (reinforced concrete, steel, masonry, etc.) how its resistance to a possible earthquake should be and the studies that need to be carried out to achieve a strength that can ensure minimum earthquake safety have been evaluated.

The webinar is which was realized in cooperation with the project management Club of the Civil Engineering Department of our university, Director of AFAM Prof. Dr. Mehmet Fatih Altan and Construction Engineer Başak Bodurođlu Yazıcı attended as speakers.

Project Management Club moderated the webinar published from social media accounts and was by Çađla Gűngör, who is also the president of the club.

AFAM activities took place in the national press as news

As a disaster Training Application and Research Center of Istanbul Aydın University for earthquakes both in our country and around the world in December 2020, our evaluations have been published as news by many national press organizations.
